

What Could the Plan Include?

Successful access management results in a roadway that is safe, efficient and attractive.

Access management on U.S. 95 could include:

Improving Local Networks	<i>Providing parallel minor arterials and collector roads.</i>
Frontage/Backage Roads	<i>Lower-speed roads parallel to U.S. 95 providing frequent and direct access to commercial and residential properties without relying on U.S. 95.</i>
Cross Access	<i>Connecting commercial developments so drivers can access multiple properties without returning to U.S. 95.</i>
Raised Medians	<i>Installing raised traffic islands between higher- volume intersections to promote safer left-turning movement and reduce conflict points on US 95.</i>
Shared Access	<i>Connecting two or more driveways to a single highway access to reduce the number of conflict points on U.S. 95.</i>
Consolidating Driveways	<i>Combining multiple driveways into one access.</i>
Access on Crossroads	<i>Moving a driveway on a corner property to the adjacent, lower-speed roadway.</i>
Intersection Improvements	<i>Aligning intersections or adding traffic signals or pedestrian crossings.</i>

Recommended locations are highlighted on the maps.
